

Environmental Information for the Electricity Product

Electricity supplied from January through December 2002*

Eco Smartsm and Enviro Blendsm Products — Green Mountain Energy Company

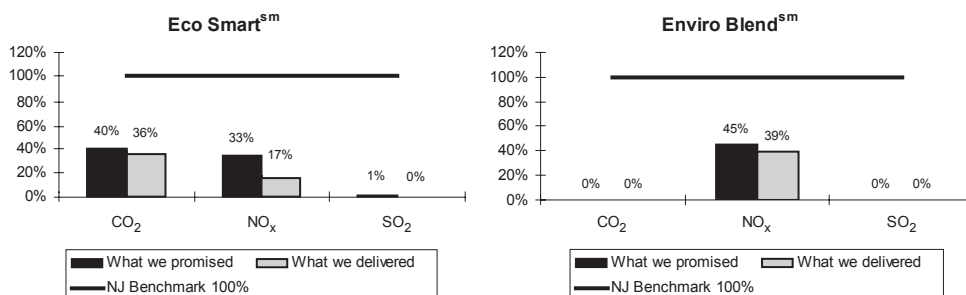

Electricity can be generated in a number of ways with different impacts on the environment.

The standardized environmental information shown below allows you to compare these electricity products with electricity products offered by other electric suppliers.

ENERGY SOURCE

	Eco Smart sm		Enviro Blend sm	
	What we promised	What we delivered	What we promised	What we delivered
Coal	0%	0%	0%	0%
Gas	49%	44%	0%	0%
Hydroelectric (large)	50%	52%	50%	50%
Nuclear	0%	0%	0%	0%
Oil	0%	0%	0%	0%

AIR EMISSIONS

ENERGY CONSERVATION

See your Terms of Service for further information regarding this label. You may also call Green Mountain Energy Company for additional information or a copy of the Terms of Service at (800) 286-5856.

Avoided Generation = 0 Avoided Air Emissions = 0 tons CO₂
 0 tons NO_x
 0 tons SO₂

* The above reflects our best current estimate of the actual environmental data for the electricity we supplied during calendar year 2002 compared to what we projected for that period. If there is a discrepancy between this estimated data and the actual data for 2002 we will provide you with updated information.

Customers who choose Green Mountain Energy® electricity will not have electricity from a specific generating facility delivered to their homes, but they are able to support generators of the energy resources included in their Green Mountain Energy® blend in an amount equal to their annual electricity use.

The power blend information provided describes the purchases of Green Mountain Energy® products over the course of a calendar year. For each calendar year or portion thereof that a customer purchases Green Mountain Energy® electricity, we will deliver to the grid enough power from our energy blend resources to match that customer's energy usage during that period.

Renewable and hydroelectric resource availability varies from hour to hour and from season to season, as does our customers' minute-by-minute consumption, but will always match our customers' annual electricity use by delivering our energy blend resources onto the grid. At all times our customers' electricity needs will be served.
